

Climate change is everyone's problem,
but no-one's task to solve it

Final Event, RUGGEDISED, September 2022

Katelien van den Berge

RUGGEDISED, City
Coordinator, Rotterdam

This project has received funding from
the European Union's Horizon 2020
research and innovation programme
under grant agreement No 731198.

IMPLEMENTING SMART CITY SOLUTIONS IN THE HEART OF SOUTH, ROTTERDAM

Figures & facts HoS

PPP => 20 years Ballast Nedam / Heijmans & Municipality

500 million => 22 million Sustainability

Social program => creating jobs locally

120.000 m² new & renovated buildings

250 e-busses => 4000 bus movements

PV panels 2500 MWh => 1200 ton CO₂ annual reduction

15.500 m² are realized

21.700 m² PV panels in total, to be finished in Q4 2023

Smart Thermal Grid 1200 MWh decrease energy use => 300 CO₂ reduction annually

nZEB (BENG) => 2000 ton CO₂ annual reduction

Smart light poles & smart waste management

RUGGEDISED GOAL:

GENERATE AND REUSE AS MUCH AS POSSIBLE ENERGY WITHIN THE PROJECT AREA

Smart Thermal Grid

Smart Electric Grid

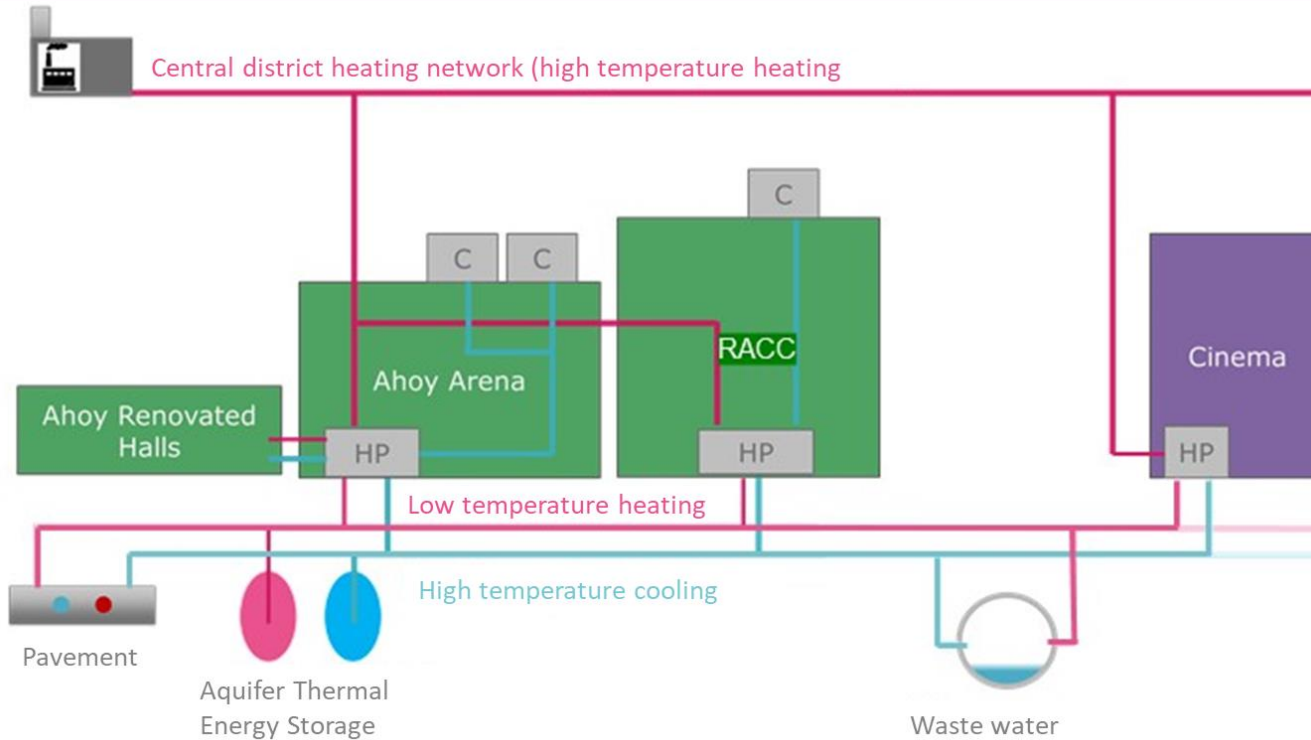

ICT on City Level

		ICT	Energie	Mobiliteit
R1	Seasonal Aquifer		✓	
R2	Thermal energy: wastewater		✓	
R3	Thermal energy: surface water		✓	
R4	Thermal energy: asphalt collector		✓	
R5	DC grid: PV panels, storage & E-mobility	✓	✓	✓
R6	Smart charging parking	✓	✓	✓
R7	Optimalising E-bus fleet RET	✓	✓	✓
R8	District energy management systeem	✓	✓	
R9	3-D city operations model	✓		
R10	LoRa netwerk	✓		
R11	Efficient & intelligent street lights	✓	✓	
R12	Nerdalize E-radiator	✓	✓	
R13	Smart Waste Management	✓		✓

Smart Thermal Grid

Smart Thermal Grid

Smart Thermal Grid

Smart Thermal Grid

Failure

- Contractual changes in the overarching area development, which were a big hassle.

Turning point

- Shared understanding that point of no return had been passed. There was only one way forward possible. Interdependence on ambassadorship.

Success

- RUGGEDISED really needed a planned urban development, otherwise the smart solutions couldn't have implemented.

Take away

- Put effort in getting to know each others interests
- Share expectations, be as open on each other's BuCa's and accept the different profit models

**CLIMATE CHANGE IS EVERYONES PROBLEM,
BUT NO-ONE'S TASK TO SOLVE IT**

Smart Electric Grid

Smart Electric Grid

Failure

- Local grid operator didn't want to give permission for experimental status. Needed for exchanging from A to B and vice versa.
- Charging points for buses are delayed at Zuidplein.

Turning point

- Implementing solutions, not connect them

Success

- Erasmus University showed that a battery was not needed.
- The implementation of large amounts of PV panels.

Take away

- Organise the governance & legal boundaries at forehand

**CLIMATE CHANGE IS EVERYONES PROBLEM,
BUT NO-ONE'S TASK TO SOLVE IT**

ICT on City Level

ICT on City Level

Failure:

- Analysing 'energy' flows in the digital twin, due to delay of implementation STG.

Success:

- Building of a working prototype of the Open Urban Platform (incl. Digital twin viewer)
- Development of the desired working prototype
- Development and testing open data standards => exchanging dynamic (real-time) sensor data between data source and platform.
- to make the next step in development of the Open Urban platform with Digital Twin

Take away:

- Data governance (and –management) within an organisation.
- 'Learn by doing', go experimenting (also as a government) to learn and to be a part of the network. Learn to develop in uncertain circumstances.

**CLIMATE CHANGE IS EVERYONES PROBLEM,
BUT NO-ONE'S TASK TO SOLVE IT**

CLIMATE CHANGE IS EVERYONE'S PROBLEM, BUT NO-ONE'S TASK TO SOLVE IT

- Energy transition is essential to fight climate change
- The Climate goals are political and social goals, not necessarily business goals
- Overall in the project we notice that we are all aware of the climate change problem and we know we have to tackle it, but when it comes down to it, we wait for others to take action and ownership of the solutions we all know will help
- Ruggedised created awareness within the PPP and stimulated more additional sustainable projects
- New way of urban development => still unknown (unloved)
